We are looking for a Senior Software Engineer to work with our Malaga-based team consisting of our CTO and 4 additional engineers. Also, you'll work remotely together with our teams in Copenhagen.

Your tasks will be to implement new products and new features and integrations in existing products to support our growing customer base. The work environment is informal and with short lines of communication. In everyday work you will have direct contact with product owners and QA personal and you will have a direct influence on both how technical and business related problems are solved.

As a Senior Software Engineer, we expect that you have experience with enterprise software development in business applications using some of the following technologies:

- Microsoft .NET

- Microsoft SQL Server

- Elasticsearch

Additionally we expect that concepts like Design Patterns, Agile development, REST API's and Automated testing is known to you, and if you have experience with Message based systems, Amazon Web Services or Microservices that is an added bonus for us.

Our workweek is 37 hours and day-to-day hours can be flexible if needed. We believe in giving
